Mapping information for this clone was provided by Dr. John D. McPherson, Department of Genetics, Washington University, St. Louis MO. For additional information about the map position of this sequence, see http://genome.wustl.edu/gsc
                                                                                                                                      USA
St. Louis,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    NOTICE: This sequence may not represent the entire insert of this fone. It may be shorter because we only sequence overlapping clone sections once, or longer because we provide a small overlap between neighboring data submissions.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      all regions were double stranded, sequenced with an alternate chemistry, or covered by high quality data (i.e., phred quality >= 0); an attempt was made to resolve all sequencing problems, such as compressions and repeats; all regions were covered by sequence from more than one subclone; and the assembly was confirmed by
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   SOURCE INFORMATION:
The RPCI-11 human BAC library was made from the blood of one male donor, as described by 90 socgawa, K., Woon, P.Y., Zhao, B., Frengen, E. Tateno, M., Catanese, J.J. and de Jong, P.J. (1998) An improved approach for construction of bacterial artificial chromosome libraries Genomics 51:1-8. The clone may be obtained either from Research Genetics, Inc. (http://www.resgen.com) or Pieter de Jong and coworkers at http://www.chori.org
                                                                                                                                                                                                                             Submitted (15-OCT-2002) Department of Genetics, Washington University, 4444 Forest Park Avenue, St. Louis, Missouri 63108, On Sep 20, 2002 this sequence version replaced gi:20128734.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              NOTE: This is a 'working draft' sequence. It currently consists of 7 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.
            Research, 320 Charles Street, Cambridge, MA 02141, USA On Mar 7, 2003 this sequence version replaced gi:28195970. All repeats were identified using RepeatMasker: Smit, A.F.A. & Green, P. (1996-1997) http://ftp.genome.washington.edu/RM/RepeatMasker.html

Baylor Plaza, Houston, TX 77030, USA.

The sequence in this assembly is a combination of BAC based reads and whole genome shotgun sequencing reads assembled using Atlas and whole genome shotgun sequencing reads assembled using Atlas in the feature table below represents a scaffold in the Atlas assembly (a 'contig-scaffold'). Within each contig-scaffold, individual sequence contigs are ordered and oriented, and separated by sized gaps filled with Ns to the serimated size. The sequence may extend beyond the ends of the clone and there may be sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Submitted (05-SEP-2002) Human Genome Sequencing Center, Department of Molecular and Human Genetics, Baylor College of Medicine, One Baylor Plaza, Houston, TX 77030, USA
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Rat Genome Sequencing Consortium.

NOTE: This is a "working draft' sequence. It currently consists of 2 contigs. The true order of the pieces is not known and their order in this sequence record is
contigs within a contig-scaffold that consist entirely of whole genome shotgun sequence reads. Both end sequences and whole genome shotgun sequence only contigs will be indicated in the feature table.
                                                                                                                                                         TyrGlnGluThrLeuLysGluIleAspAspValTyrGluLysTyrLysLysGluAspAsp :::
                                                                                                                                                                                                                                                                                                                                                                                           arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.

The sequence in this assembly is a combination of BAC based reads and Whole genome shotgun sequencing reads assembled using Atlas (http://www.hgsc.bcm.tmc.edu/projects/rat/). Each contig described in the feature table below represents a scaffold in the Atlas assembly (a 'contig-scaffold'). Within each contig-scaffold, individual sequence contigs are ordered and oriented, and separated by sized gaps filled with Ns to the estimated size. The sequence contigs within a contig-scaffold that consist entirely of whole genome shotgun sequence reads Both end sequences and whole genome shotgun sequence reads. Both end sequences and whole genome
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Worley, K.C.

                                                                           (see http://www.hgsc.bcm.tmc.edu/docs/Genbank draft data.html). NOTE: This is a 'working draft' sequence. It currently consists of 3 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   115

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   9
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                80
                                                                                                                                                                                                                                                                                                                                                                                                             The present sequence represents the human tumour suppressor gene INGIL. The present invention also describes the human gene TSC403 expressed specifically in normal lung tissue. TSC403 is useful in the diagnosis, investigation and treatment of cancers in which it is overexpressed, including cancer of the lung, breast, fallopian tube, oesophagus, colon, thyroid, parotid gland, bladder, ovary or pancreas. INGIL is useful in the investigation of cell proliferation, aging and apoptosis and the pathology of cancer, the diagnosis and treatment of cancer such as cancer of the colon, stomach, oesophagus or fallopian tube, and the screening of candidate drugs for the treatment of such
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    MetLeuGlyGlnGlnGlnGlnGnLeuTyrSerSerAlaAlaLeuLeuThrGlyGluArg

The present sequence is a DNA encoding tumour suppressor homologue protein, p331NG2 which is homologous to human tumour suppressor protein, p471NG3. The tumour suppressors of the invention are involved in the regulation of cell proliferation and in the control of cellular aging, anchorage dependence and apoptosis. The tumour suppressor protein, anchorage dependence and apoptosis. The tumour suppressor protein, p471NG3, nucleic acids encoding it and antibodies against it are useful for diagnosis, prevention and treatment of tumours and cancers. The p471NG3 DNA is also used in gene therapy.
                                                                                                                                                                                                                                                                                                                                                                                                                                                               Tumour suppressor; p471NG3; cell proliferation; cellular aging; p331NG2; anchorage dependence; apoptosis; tumour; cancer; gene therapy; ds.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               80
                                        The present sequence represents the human tumour suppressor gene INGIL. The present invention also describes the human gene TSC403 expressed specifically in normal lung tissue. TSC403 is useful in the diagnosis, investigation and treatment of cancers in which it is overexpressed, including cancer of the lung, breast, fallopian tube, ossophagus, colon, thyroid, parotid gland, bladder, ovary or pancreas. INGIL is useful in the investigation of cell proliferation, aging and apoptosis and the pathology of cancer, the diagnosis and treatment of cancer such as cancer of the colon, stomach, ossophagus or fallopian tube, and the screening of candidate drugs for the treatment of such
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  SerArgLeuLeuThrCysTyrValGlnAspTyrLeuGluCysValGluSerLeuProHis

This sequence encodes the human tumour suppressor (TUSUP) protein. The TUSUP sequence was identified from a human lung cDNA library. The protein is 240 amino acids in length and has one potential cAMP and cGMP dependent protein kinase phosphorylation sites, into potential protein kinase phosphorylation sites, and one potential tyrosine kinase phosphorylation sites, and one potential tyrosine kinase phosphorylation sites, and one potential tyrosine kinase phosphorylation sites. TUSUP has structural and chemical similarity to p33. TUSUP can be used to treat or prevent cancer, particularly of the reproductive or gastrointestinal tracts or of the immune system. Agonists of the TUSUP protein can be used to raise TUSUP specific antibodies and to screen for specific binding agents and potential therapeutic agents. The TUSUP nucleotide sequence can be used in gene therapy and as a source of

The invention is used to diagnose disorders associated with bone remodelling or osteoporosis. ABS70314-ABS70512 represent human bone remodelling genes of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        AspMetGlnArgAsnValSerValLeuArgGluLeuAspAsnLysTyrGln--

In many cases the mechanism of functional inactivation of the p53 gene remains unknown but p53 has been found to act in cooperation with C ING1. Functional cooperation between ING1 and p53 suggested that ING1 encoded a tumour suppressor protein that functioned within the p53 pathway. This data suggested a possible role for ING1 in head and neck cancers and chromosomal location of the ING1 placed it within a region that is frequently rearranged in head and neck cancers. Large scale analysis of tumours involving ING1 has not revealed mutations in ING1 nor significant variations in its expression suggesting that ING1 was not a useful gene to study in
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Detecting nucleic acid encoding exon 1b of ing1, useful for diagnosing and treating cancer, comprises contacting sample with isolated nucleic acid comprising sequence of exon 1b and detecting hybridized products

Expression of one promoter have been discovered.

Expression of one promoter (la) produces a protein identical to ING1. Expression of a second promoter (lb) produces a protein having an identical C-terminal fragment to ING1 but an additional 104 or terminal amino acids. The newly discovered protein has been designated p371NG1 (Wild type: p31NG1). p371NG1 has the characteristics of an oncogene. When overexpressed in cells (even those expressing wild type p53) p371NG1 is able to cause to proliferation or transformation of those cells. Thus detecting a nucleic acid encoding exon 1b of ing1 by hybridisation with an isolated nucleic acid having the sequence of exon 1b of ing1 or its antisense sequence can identify individuals expressing the concegenic form of ing1. Novel peptide sequences taken from the 104 or terminal peptide of p371NG1 can also be used to raise antibodies that can also be used in detection methods for treatment of cell proliferation disorders, especially cancers and for diagnosing and
exons of the ing

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Mutations in or loss of the p53 gene occur in more than 50% of human tumours and tumour cell lines, but functional inactivation of the p53 pathway occurs in a much larger proportion of tumours in a much larger proportion of tumours. In many cases the mechanism of functional inactivation of the p53 gene remains unknown but p53 has been found to act in cooperation with ING1. Functional cooperation between ING1 and p53 suggested that ING3 encoded a tumour suppressor protein that functioned within the p53 pathway. This data suggested a possible role for ING1 in head and neck cancers and chromosomal location of the ING1 placed it within a region that is frequently rearranged in head and neck cancers large scale analysis of tumours involving ING1 has not revealed mutations in ING1 nor significant variations in its expression suggesting that ING3 was not a useful gene to study in cancer eticlogy. However, alternative initiation exons of the ing1
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             diagnosing

Expression of one promoter (1a) produces a protein identical to ING1. Expression of a second promoter (1b) produces a protein havin an identical C-terminal targement to ING1 but an additional 104 N-terminal amino acids. The newly discovered protein has been designated p37ING1 (Wild type: p33ING1). p37ING1 has the characteristics of an oncogene. When overexpressed in cells (even

those expressing wild type p53) p371NG1 is able to cause proliferation or transformation of those cells. Thus detecting a nucleic acid encoding exon 1b of ing1 by hybridisation with an isolated nucleic acid having the sequence of exon 1b of ing1 or its antisense sequence can identify individuals expressing the oncogenic form of ing1. Novel peptide sequences taken from the 104 N-terminal peptide of p371NG1 can also be used to raise antibodies that can also be used in detection methods for the p371NG1 variant. The polypeptides may be useful in gene therapy for treatment of cell proliferation disorders, especially cancers and for diagnosing and

The sequence is a variant of the ING1 gene, which is a tumour suppressor gene candidate. The cancer associated antigen polynucleotides and polypeptides are useful for screening for the possible presence of a pathological condition in a subject such as cancer. The cancer associated antigen polypeptides are useful for producing vaccines.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      ò
                                                                                                                                                                                                                                                                                                                                                                                                            The invention discloses monoclonal antibodies which can be used, in combination, to specifically recognise epitopes of ING1 (inhibitor of growth 1) protein isoforms. ING1 is a tumour suppressor gene and its expression is regulated through the cell cycle, peaking in the S phase. Expression of ING1 is down regulated in breast tumours and lymphoid malignancies. Overexpression of a construct containing the ING1 gene is able to inhibit cell growth by reducing the fraction of cells which enter into the S phase. The monoclonal antibodies are useful for detecting an corredgenously expresses ING1 protein. The anti-ING1 monoclonal antibody combination consists of two or more antibodies of CAbl-CAbl0 (not defined), preferably amxure of CAbl-CAbs, which can detect at least two different isoforms of ING1. The antibodies are also useful for diagnosing a disease e.g. tumour or medical condition in an animal (preferably, human) associated with aberrant levels of an ING1 protein. The sequence presented is the human inhibitor of growth 1 (ING1) isoform, or more insease.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     LeuProHisAspMetGlnArgAsnValSerValLeuArgGluLeuAspAsnLysTyrGln 57

human tumours and tumour cell lines, but functional inactivation of the p53 gate burner tumours and tumour cell lines, but functional inactivation of the p53 gate the p53 gathway occurs in a much larger proportion of the p53 gate and y cases the mechanism of functional inactivation of the p53 gate remains unknown but p53 has been found to act in cooperation with ING1. Functional cooperation between ING1 and p53 suggested that ING1 plant p53 suggested that is ING1 encoded a tumour suppressor protein that functioned within the p53 pathway. This data suggested a possible role for ING1 in head and neck cancers and chromosomal location of the ING1 placed it vertain a region that is frequently rearranged in head and neck cancers undations in ING1 nor significant variations in its requently that ING1 was not a useful gene to study in cancer etiology. However, alternative initiation exons of the ing1 gene, each having their own promoter lave been discovered.

Expression of one promoter (1a) produces a protein having an identical C-terminal fragment to ING1 but an additional 104 of ING1. Expression of a second promoter (1b) produces a protein has been can identifical C-terminal fragment to ING1 but an additional 104 of Lose expressing wild type ing1) by the protein has the class of an oncogene. When overexpressed in cells (even those expressing wild type p53) p371NG1 is able to cause proliferation or transformation of those cells. Thus detecting a nucleic acid encoding exon 1b of ing1 by thypridisation with an ancoding exon 1b of ing1 by thypridisation with an oncogene. When overexpressed in cells of ing1 novel peptide sequences taken from the log concerning form of ing1 novel peptide sequences a protein detecting a the terminal peptide of p371NG1 can also be used in detection methods for the p371NG1 variant. The polypeptides may be useful in gene theres and encoded concer
                                                                                                                                                              Detecting nucleic acid encoding exon 1b of ing1, useful for diagnosing and treating cancer, comprises contacting sample with isolated nucleic acid comprising sequence of exon 1b and detecting hybridized products
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               eration disorders, especially cancers and for diagnosing and

                                                            The present sequence encodes a human cancer associated antigen. The sequence is the wildtype of the ING1 gene, which is a tumour suppressor gene candidate. The cancer associated antigen polynucleotides and polypeptides are useful for screening for the possible presence of a pathological condition in a subject such as cancer. The cancer associated antigen polypeptides are useful for producing vaccines.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 A partial cDNA clone (AAT69651), designated ING1, codes for a novel tumour suppressor protein p331NG1 (AAW19118) that is a potent inhibitor of cell growth. It was isolated by subtractive theybridisation between normal mammary and transformed epithelial cDNAs, isolation of an antisense ING1 cDNA insert that caused increased cell proliferation, and use of the insert to screen normal human fibroblast and Hela cDNA libraries. A complete ING1 sequence (AAT69652) was obtd. by 5'RACE. ING1 is localised to the 13433-34 chromosome region, to which a number of human cancers have been mapped. ING1 nucleic acids can be used in the diagnosts of breast cancer, a decreased level of ING1 mRNA indicates cancerous cells.
                                                                                          Tumour suppressor gene; ING1; p33ING1; breast cancer; brain cancer; diagnosis; gene therapy; ss.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Isolated tumour suppressor gene, ING1 - useful to develop products for inhibiting or increasing cell proliferation, in particular for treatment or diagnosis of cancer
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Sequence 1902 BP; 574 A; 391 C; 461 G; 476 T; 0 other;

Growth) partial cDNA clone that codes form a pulling of growth partial cDNA clone that codes form a pliling polypeptide (see AAW79674), a novel inhibitor of cell growth and a candidate (see AAW79674), a novel inhibitor of cell growth and a candidate cumour suppressor. Into is a new gene that is expressed in normal mammary epithelial cells, but which is expressed in normal ceveral cancerous mammary epithelial cell lines and is one expressed in many primary brain tumours. To isolate ING1, a subtractive hybridisation of brasat cancer cell line cDNAs was performed with CDNA from normal mammary epithelial cells, and subtracted cDNAs were cloned into retrovirus vector pLNCX. Following passage through a packaging line, normal mouse mammary epithelial cells were infected, and infected cells were infected into nude mice. Putative transforming fragments from tumours were isolated by PCR (see AAV62299-1) and subcloned into LNCX. An ING1 fragment was obtained and used to screen normal human fibroblast and Heia cell cDNA libraries. 2 clones were sequence (see AAV6229) was obtained by RACE. A claimed method to botain the partial ING1 sequence. The complete cDNA sequence (see D33ING1 peptide or an oligonucleotide encoding such as a peptide. AAV6229) was obtained for inhibiting apoptosis in a eukaryotic cell involves administering an antisense oligonucleotide. Also claimed are a method for determining the apoptotic characteristics of a claimed are method for inhibiting apoptosis in a eukaryotic cell, an assay for determining the level of p33ING1 ectivity in a eukaryotic cell, and an isolated eukaryotic cell, an else vector and an isolated eukaryotic cell, and an else sequence and an else sequence and else solations and an isolated eukaryotic cell, an else sequence and else sequence and else solations and else solations and else sola
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       TyrGlnGluThrLeuLysGluIleAspAspValTyrGluLysTyrLysLysGluAspAsp
Modulating eukaryotic apoptosis by increasing p331NG1 activity -using p331NG1 derivatives, to induce apoptosis in cancer cells, and in the investigation of apoptotic pathways
                                                                                                                                                                                                                                                                         the nucleotide sequence of a human ING1 (INhibitor
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Sequence 1902 BP; 574 A; 390 C; 462 G; 476 T; 0 other;

proventing or treating inflammation, or disorders associated with cell; proliferation and apoptosis e.g. bone cancer, brain cancer, cervix cancer, adenocarcinoma, leukaemia, lymphoma or melanoma. They are particularly useful as models for developing human therapeutic targets, identifying therapeutic proteins, or serving as targets for the development of human therapeutic agents that modulate tumour suppressor protein activity in cells and tissues that express the tumour suppressor protein activity, in cells and tissues that express the tumour suppressor protein. Polypeptides of the invention are used for identifying agents that modulate their activity. They are useful for raising antibodies or cliciting an immune response; as a reagent in assays designed to quantitatively determine levels of the protein (or its binding partner or ligand) in biological fluids; or as markers for tissues in which the corresponding protein is preferentially expressed. The invention is also used as vaccines. The present sequence is human tumour suppressor.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  AspGluLys1leGlnIleValThrGlnMetLeuGluLeuValGluAsnArgAlaArgGln 117

A full-length cDNA clone (AAT69652), designated ING1, codes for a novel 33 kDa tumour suppressor protein p33ING1 (AAW19119), formerly c p33IG1, that is a potent inhibitor of cell growth. A partial clone (AAT69651) was isolated by subtractive hybridisation between normal mammary and transformed epithelial cDNAs, isolation of an antisense ING1 cDNA insert that caused increased cell proliferation, and use of the insert to screen normal human fibroblast and HeLa cDNA libraries. The complete ING1 sequence was then obtd. by 5'RACE. ING1 is localised to the 13q33-34 chromosome region, to which a c number of human cancers have been mapped. ING1 nucleic acids can be used in the diagnosis of breast cancer; a decreased level of ING1 mRNA indicates cancerous cells. They can also be used in gene therapy methods to block the proliferation of cancer cells.
                                                                                                                                                                                          Tumour suppressor gene; ING1; p33ING1; breast cancer; brain cancer; diagnosis; gene therapy; ss.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Isolated tumour suppressor gene, ING1 - useful to develop products for inhibiting or increasing cell proliferation, in particular for treatment or diagnosis of cancer
